

Make managing skills easy

SSG Skillnation creates value and saves resources

For industrial sites

Industry's transformation and increasing external demands

European industry is undergoing extensive change. Increased automation, digitalisation and the integration of production and services are creating new challenges for both industrial sites and contracting companies. At the same time, requirements for competence, certificates and authorisations in order to carry out work tasks are becoming ever more stringent. To meet these demands and remain competitive, innovative solutions are needed.

The challenge: skills shortages

As requirements for safety, sustainability and digitalisation increase, it is becoming increasingly difficult to ensure that the right competence is in place at the right time. A lack of oversight of employees' and contractors' competences can lead to serious consequences: increased safety risks, production stoppages and regulatory breaches.

Together with industry, we have developed SSG Skillnation – a digital platform that gathers, verifies and manages competences, certificates and authorisations in one place. When competence is traceable, up to date and accessible, risks are reduced and administration is simplified.

Say goodbye to spreadsheets!

Easily understand your employees' level of skills with the help of competence profiles and a powerful overview. We refer to this as your competence requirements.

There are savings to be made

We have created an ecosystem in which other stakeholders take steps and contribute information that your site would otherwise have had to provide manually. These synergies mean that what previously took you weeks can now be done in just a few days. What previously took days can be resolved in hours or minutes. Calculate your ROI and see what savings you can make.

Search for or filter the groups, individuals or profiles that need to be reviewed.

The competence profiles are clearly displayed, and if any are missing, they can easily be assigned.

Expand the view to see exactly which profiles have been assigned and which competences require action for each individual.

You can find the status of your skills here. You will see how long they are valid for, whether they have expired, or whether they are missing.

Benefits for industrial sites

- 1. Replace manual spreadsheets or outdated support systems:** The question "which file is the latest?" disappears because everyone works from the same real-time information. You no longer need to worry that someone has accidentally deleted information or forgotten to update documents. Better control leads to more efficient processes, which can result in cost savings.
- 2. Straightforward management of certificates and external competencies:** When your employees complete training courses and certifications (internal/external), the results are sent directly to SSG Skillnation. This reduces administrative work for everyone and gives you an up-to-date status immediately.
- 3. Easier work with adherence and compliance:** With SSG Skillnation, you avoid manual preparations ahead of inspections and audits – all data is gathered in one place. You get a clear overview of which employees meet your requirements, who is missing something, or who is at risk of no longer meeting the requirements soon.
- 4. Find the right competence:** When in-house competence is unavailable, you can easily search for contractor companies with the required competence, or find affiliated education providers. For enquiries, you can quickly locate contact details for both education providers and contractors..
- 5. Reduced administration:** Paper-based certificates create a significant administrative burden, particularly when they are lost and need to be replaced quickly. By storing certificates digitally, handling, verification and access are all simplified, while issues with lost or worn certificates are reduced.
- 6. A good environmental choice:** Having to issue "plastic cards" is not a sustainable step in the right direction, so moving to digital competence credentials via SSG Skillnation is also an environmental choice that can be a positive benefit.
- 7. Easily accessible support:** SSG handles many calls every day from sites and contractors. We have extensive experience, as well as well-established routines and systems, to meet the industry's requirements. You can benefit from this too, and you can refer both administrators and course participants directly to us.
