

EASY PROJECT STAFFING THAT MEETS TAX AGENCY REQUIREMENTS.

SSG ACCESS HIGH is a project staffing service for industrial plants and an electronic contractor register for contractors in industry. This service allows your plant to provide staff for your projects and ensure that the skills requirements you have defined are met. Any contractor then turning up for work can use their phone to check into and out of the project using the linked electronic contractor register. This facilitates project staffing for industrial plants and reduces administration thanks to mailings, contact information and similar.

In your capacity as a plant, you can use the Project section to register projects and link companies that will be working for you. You can then see which individuals at the company meet your skills requirements and whether they are already allocated to the project.

The Contractor Register section allows you to maintain a list of individuals working at a construction site and when they start and end every shift. This meets Swedish Tax Agency

requirements for electronic contractor registration (Requirements concerning electronic contractor registration for construction projects, SKVFS 2015:6).

HOW IT WORKS

A project is set up via the ssg website. A contracting company is linked to this project, and the contractors registered for the company can be allocated to it. When allocating staff, you can see whether the contractors meet the requirements defined for the project such as SSG ENTRE, hot work or forklift operation permits. Any contractor arriving at the plant can then use their mobile phone to check into the project. Their time of arrival is then recorded in the electronic contractor register, and Swedish Tax Agency requirements are met.

ADVANTAGES OF SSG ACCESS HIGH

For industrial plants:

- Simple administration of contractors working on projects at the plant. Functions are available for registering projects, linking companies, providing staff and viewing compliance with skills requirements. Staff can also be viewed in the access control.
- Option for producing project list views.
- Option allowing XML reports to be extracted for the Swedish Tax Agency.

For contractors:

- Simple project check-in on their mobile phones.
- Easy to provide staff for projects using employees and subcontractors (information is sent by email)
- Option allowing use of the plant's contractor register.
